AI STRATEGY DISCOVERY

TRACE Services x FutureInSites

Understanding your business and identifying where AI can create the most value.

June 10, 2026 | Prepared for TRACE Services Co.

WHO WE ARE

About FutureInSites

- AI Strategy and Engineering firm
- We help organizations move from AI experimentation to execution
- Build. Customize. Train. -- our methodology, every engagement
- Work with SMBs and enterprise organizations across industries

Relevant Experience

- 25+ years leading digital transformation, data, and technology platform strategy
- Built and scaled AI SaaS products driving \$100MM+ in managed spend
- AI strategy and implementation across multiple industries and use cases
- Product leadership, platform architecture, and engineering at enterprise scale
- Track record driving AI adoption, governance, and organizational change

Why AI, Why Now – MEP and Construction

The MEP and construction industry is labor-intensive, estimation-heavy, and documentation-rich -- exactly where AI delivers fast ROI.

What once took hours can happen in minutes: bid prep, field documentation, compliance reporting.

Competitors are starting to adopt. The question is not whether to move -- it is whether to lead.

The window to lead is now.

What We Know About TRACE

- Leading MEP contractor: HVAC, Electrical, Plumbing, Process Piping, Design-Build, Energy Services, Controls
- Memphis and Jackson, TN -- projects spanning Tennessee and Mississippi
- Leadership team with a collective century of field experience
- Referred by SitelogIQ (Russ Phillips, Blair Perry) -- MEP partners they trust

What Success Could Look Like

- Estimators spending 30-50% less time assembling bids
- Project managers spending less time on documentation and reporting
- Faster response to field service calls and work orders
- Better capture of institutional knowledge before it walks out the door
- Improved consistency in project delivery, compliance, and quality
- A clear, sequenced roadmap for AI adoption -- prioritized and measurable

Where AI Creates Value for a Company Like TRACE

Estimating & Bid Automation

Faster, more accurate bids with AI-assisted takeoffs and scope analysis

Field Service & Work Orders

AI-assisted triage, routing, and real-time documentation for field crews

Project Documentation

Auto-generate RFIs, submittals, and compliance records from field notes

Energy Services Optimization

AI analysis of building performance data to surface efficiency opportunities

Controls & Building Automation

Intelligent monitoring and predictive maintenance insights

Workforce Knowledge Capture

Turn decades of technician expertise into searchable, trainable assets

Build. Customize. Train.

1 Build

- Design AI solutions tailored to your highest-value use cases
- Develop working tools -- not demos or decks
- Focus on problems with clear, measurable value

2 Customize

- Adapt tools to your workflows, data, and team preferences
- Configure for your language, processes, and operational context
- Not the other way around

3 Train

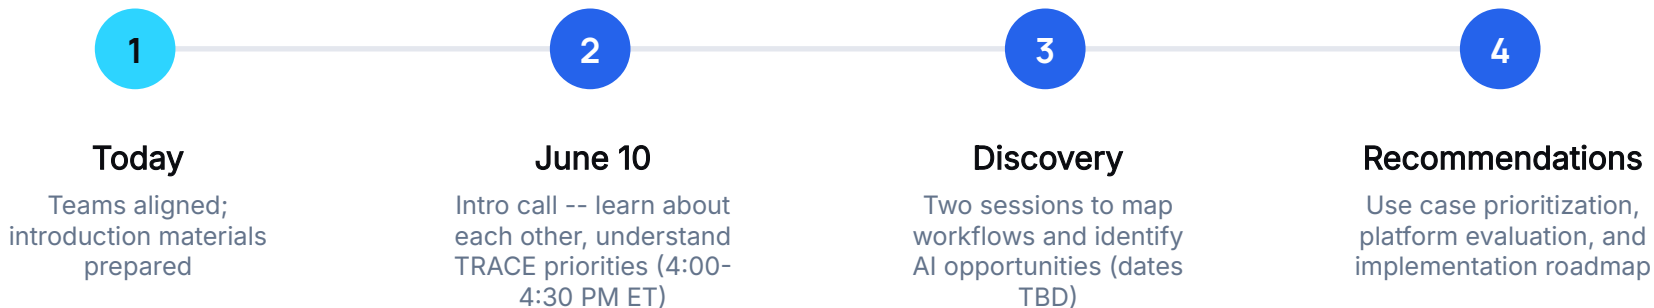

- Drive adoption so your team owns the tools long-term
- Build internal capability, not dependency on us
- Ensure knowledge transfer at every step of the engagement

What Discovery Looks Like

- We come in with questions, not answers
- Document current workflows, tools, and bottlenecks
- Identify the 2-3 use cases with the fastest path to value
- Align on success criteria before we recommend anything

WHAT COMES NEXT

Next Steps

**We are here to understand your
business first.**
